You can type in macro via the text input area in this editor. There are two ways of setting the macro: 1. User interface: Click on the macro and set. The macro you set can be called in this editor. 2. CMD: You can set macro by using the CMD from the left side bar. Also, the macro can be called in this editor. NOTE: If you are using CMD, a floating window will be displayed when you call your macro. For more information, please refer to the following link. PREVALUEDMACRO Description: This function is useful when you have a known macro that you want to use in this editor. The macro name you want to use will be displayed in this function. This function can be used in both the macro window and the macro input field. SCRIPT Description: This function enables you to run a script with its parameters. You can use "-" or "--" to indicate the end of the parameters and "|" for the concatenation of two parameters. Note that the script will be called with the first

parameter before being run. **IMPORTSCRIPT** Description: This function is used to import a script (macro or script) from a file. **TASK** Description: This function is used to create a task. You can set the name, description and the script or macro to be used. For more information about the task script or macro, please refer to the following links: **GSTANAL** Description: This function is used to create a global task. **GSLOCK** Description: You can lock or unlock the script or macro. You can set "key" to enable or disable global locking. **SCRIPTMOVIE** Description: This function enables you to play the movies in a script or macro. You can set the name of the movie that should be played and the duration of the movie (in minutes). **SCRIPTMOTION** Description: This function enables <https://ahlihouse.com/wp-content/uploads/2022/05/malvnah.pdf>
