## Getting Started with AutoCAD

---

The AutoCAD software uses a click and drag-type interface to facilitate the drawing process.

Begin a drawing by selecting either one or multiple objects on the screen to include in the drawing. AutoCAD displays these objects in a snap mode on the left side of the screen. Click and drag the mouse to place the cursor, and double-click the mouse to place the object at the last mouse position. AutoCAD displays a line to indicate the last position.

---

To resize objects in the drawing, simply hold down the Ctrl key and drag a corner handle. Hold the Ctrl key and drag the cursor to resize an object's corners.

AutoCAD displays handles at the corners of the selected object.

Note that it is possible to place objects in such a way that two or more objects overlap. Select the top object and hold down the Alt key. To move a selected object, select the object and press the Enter key on the keyboard.

---

AutoCAD will move the selected object. To select an object, hold down the Ctrl key, and select the object. You can place objects by pressing the Enter key after selecting the objects. Double-clicking the mouse selects multiple objects in the drawing area and moves them simultaneously. To select multiple objects, hold down the Ctrl key and drag the mouse to select the objects. Double-clicking the mouse selects multiple objects.

## What's New In AutoCAD?

Automatic feature identification and assignment: CAD/CAM applications are intuitive to use but have limitations when there is a need to transfer a change made in one drawing to another drawing. For example, if a change

---

is made to a dimension in Drawing A, and that change is stored in Drawing B, how does the change get transferred from Drawing A to Drawing B? With RapidFEATURES feature-assignment tool, you can make changes to the base feature in a drawing, and automatically have them transferred to other drawings. The new feature-assignment tool enables you to automatically assign a feature to a layer, a group, or a drawing,

---

based on a name or a type of layer. For example, you can assign a linear dimension to a drawing and add comments to the dimension, and then, when that dimension is transferred to other drawings, the comments will be associated with the dimension automatically. (video: 3:25 min.)

You can now use multiple workfiles to update drawings in a family. If you have multiple workfiles and have changes to be imported, make sure they are in

the family with your most-current files. CAD/CAM applications are intuitive to use but have limitations when there is a need to transfer a change made in one drawing to another drawing. your menus for commonly used options and tools. Quickly access common options and tools directly from the menu bar. Use the new floating dock and quickly get back to work. Additional Help and Options: The Help and Options window has been improved with more options to control the display of the Help and Options window and how you interact with it.
