KEYMACRO is a graphical keyboard macro manager that lets you record, edit and playback keyboard commands on a Windows platform. With KEYMACRO you can easily create text or graphic commands that you can insert into any software or into any script file. You can create a macro in several ways: recording, editing, playback and profile. Keyboard shortcuts or keyboard macros work great for repetitive tasks like opening a file or starting a program. In the workplace, you can use the macro recorder to quickly open a file from your desktop, file manager or recycle bin. You can also create macro and key combinations for your favorite software. With a few keystrokes, you can map your keyboard shortcuts to mouse buttons or keyboard shortcuts. In this way you can use the mouse or keyboard to perform actions that you normally do with your keyboard. With Keyboard Macro Recorder you can record your keyboard commands for later use. The keyboard commands can be any text or a simple picture. The image is not attached to the recording. When you run the program for the first time, the program will ask you to select a folder to record your macros. For this purpose it will use the default Windows Registry location. With keymacro you can create one or more profile files, each of them with different configuration options. Each profile can have different keyboard commands and image types to define the keyboard macros. A special function is available to delete a profile file or to change the default folder for recording keyboard commands. In addition to the standard functions you can also open a text file with your commands. Keymacro offers an option to configure the keyboard shortcuts. You can select the default keys to use for a specific shortcut, the shortcut itself and if the shortcut is activated as a toggle. The text to use as the shortcut can be edited or even defined by using a macro recorder. You can define a time limit for a recording to protect from accidentally using macros. You can also save your macros to a profile file to use it later. The program can be configured to start in background. For this purpose, you can have the program show in the taskbar tray area or not. Keymacro can be configured to record macros to a text file. You can define the default folder for the text file. The text file can be opened later with the included macro editor. KEYMACRO is a nice little software that will enable you to configure keyboard shortcuts. The software can also configure keyboard shortcuts and macros to software. KEYMACRO 77a5ca646e
