1. SEATTLE (AP) -- Seattle City Councilman Richard Conlin has been called back to active duty after emergency surgery to repair a bullet wound to his shoulder. He expects to be back in a week. Conlin says the wound came from. PDF 2. Guerrilla warfare has taken hold of Somalia, and the United States, the only superpower in the 21st century, is now discovering that it has been left behind. And instead of reacting in kind, as other developed nations have done, it is trying to build a new, modern and democratic state on the ruins of an earlier, despotic model of government. 3. China and Russia are playing an increasingly pivotal role in Somalia, which now has become a battleground for their competing agendas in the region. 4. An uprising in the region erupted in December, but was brutally suppressed by the government of President Siad Barre. The rebels called for a return to a system of "watan, waqtani and wadani" - or clan loyalty, Islamic values and a united Somalia. 5. "Somalia has a long-standing culture of revolt," says Sarah Cheney of the Heritage Foundation, a conservative Washington think-tank. "Somali society is a society of weak states, and so rebellion has always been an essential element to the society. They have to have rebellions simply because they've always had rebellions." 6. One of the most significant voices in Somalia today is Abdirashid Hashi Dawawoo, the country's most popular religious leader. His rallies, especially around the time of the Islamic holy month of Ramadan, attract thousands of worshipers. It is a simple house next to the El-Buri Mosque, where he lives. 7. In an interview with The Associated Press, "Abdirashid," as he is popularly known, said that the government failed to properly share the wealth of the country's natural resources with the Somali people. 8. The pulleys of V-belt-type continuously variable speed transmission systems generally include a rim, such as of cast iron, having a cylindrical, substantially rectangularly cross-sectioned portion and an annular back surface between the rim portions. A belt with its opposite ends wrapped about pulley flanges are pressed against the rim portions by clamping the belt against a surface of the rim. The rim is formed by the casting of molten metal in a mold. This rim tends to have irregular internal distortions or surface irregularities which, because of the pinch-tightness required for obtaining the pulley belt clamping action, renders it difficult to uniform-tension the belt. In order to accommodate the irregularities and to improve the uniformity of the belt clamping action, it has been suggested to replace the cast iron rim by a machined rim and to provide a projecting circular rib formed integrally with the rim and extending edd6d56e20
