Super Smash Bros for Android .Cellular expression and structure-function analysis of ICR II in transgenic mice. Intracellular retention regulators (ICRs) are a family of proteins that are involved in the intracellular retention of proteins with Lys residues. To date, three mammalian ICR proteins, namely, IC74, SR45, and ICR11, have been identified. The domain structure and expression pattern of these ICR proteins are distinct, but the in vivo functions of each ICR protein remain unclear. In this study, transgenic mice were generated to examine the in vivo functions of ICR11 and the pathogenesis of breast cancer. We generated transgenic mice expressing ICR11 under the control of a tetracycline-responsive promoter and demonstrated that these mice express ICR11 in a regulated manner in all tissues of the transgenic mice, regardless of age and gender. To determine the function of ICR11 in vivo, we established two mouse lines with similar genetic backgrounds but expressing the human ICR11 protein in the mammary gland: one line overexpressing human ICR11 in the mammary gland and the other expressing mutant ICR11 that lacks the nuclear localization signal. The results of this study demonstrated that overexpression of human ICR11 in the mammary glands led to hyperplasia of mammary glands with the formation of terminal end buds, inhibition of epithelial differentiation, and increased cell proliferation in the gland. However, the null mutation of ICR11 by using a targeted ICR11-deficient mouse line did not lead to any observable phenotypes in the mammary glands. These data suggest that ICR11 has a growth-promoting function in the mammary gland.The embodiments described herein relate generally to a micro-electromechanical system (MEMS) device and, more particularly, to a MEMS sensor and/or a power management system for the MEMS sensor. Many MEMS devices include a MEMS sensor. The MEMS sensor is used for determining various properties of a fluid or gas such as the pressure or viscosity of the fluid or gas. For example, pressure sensing devices are used to determine the pressure of an atmosphere at a given location. Similarly, flow sensing devices are used to determine the rate of flow of a gas or a 570a42141b
