KeyMACRO is a software utility that helps you record Windows keyboard shortcuts in a customized way. It allows you to configure the recording of different keyboard shortcuts into one macro. As a result, you can then easily trigger a specific set of actions, no matter if you need to quickly start or stop a process, check information about a file or folder, execute a command, launch a calculator, switch among folders, or perform some other task with ease. Moreover, you can also use KeyMACRO to log the state of your keyboard keys, so you will be able to easily check it when the PC boots up again. What's more, you can save these macros to a custom XML file. KeyMACRO can collect input from Windows' built-in keyboard layouts, including the US, UK, and French versions of the keyboard. During our tests, we have managed to record all the hotkeys necessary to set, open, save, and close a document in OpenOffice, as well as launch, close, and delete an application. The software is very easy to use, supports the majority of the most common keyboard shortcuts, and doesn't cause any problems in the way it works. A free demo version is available for download. Keyboard Commander Description: Keyboard Commander is a software utility that allows you to modify keyboard shortcuts, change their active states, reset them, and duplicate keyboard shortcuts and assign them to other shortcuts. As you can see in the video below, the software is especially designed to assist you in creating macros by keyboard. Keyboard Commander carries out a task very quickly, so the overall performance of the computer is not burdened. All in all, the software lets you easily add, modify, and remove shortcuts in Windows and assign them to any shortcut on your computer. The main section of Cross+A presents you a set of controls, which include search, import, and export options. You can search for the desired word by typing its description into the text box, type a letter into the letter field, or click the highlighted word in the list of the displayed words. To continue, simply click on the Add button to add the selected word to the list, or press the Enter key to proceed with your next search. The next step is to switch to the Dictionary tab and pick out the English dictionary that you would like to use. After you have chosen the words you wish to use, you can export them to your clipboard by clicking on the Export button. The next tab lets you add as many words as you wish to the Cross+A database. Click on the Add button, and you'll be able to select the description of the word, its answer, or perform some actions with the word, such as change its letters, description, or replace it with the entered letters. To change any field, click on it to highlight the text, and then press the right or left arrows, or enter the letters you want to replace. In order to finish, you can choose what actions you want to perform with the word by clicking on the desired icon. For example, the option to remove a word can be found on the right side of the screenshot below. You can also change a word's answer to a specific word, or set the search radius to be as wide as you wish to perform the search. The Search radius option gives you the chance to choose a search radius for your words. For example, it can be set from 2 to 8 letters. If you decide to select a search radius smaller than 2 letters, the application will focus on searching for words starting with those letters. To do that, you need to type the first letters of the desired word into the search field, click on the desired button, and then pick the desired number of letters you'd like to use as a search radius. You can also set the number of displayed words by clicking on the Change column number. The number of displayed words can be set between 1 and 50, but the maximum number is 20. After you have chosen the words and their descriptions, you can view statistics of your database by clicking on the Statistics button. The Statistics tab contains quite a few different statistics. The most important of them is the word
