Recover Deleted Files and Data from Virtual Hard Disk Files! BitRecover VHD Recovery Wizard is an efficient tool which enables you to recover deleted or lost files from different virtual hard disk formats, such as VirtualBox, Parallels, VMware, Virtual PC, and VMWare Server. This program recovers lost/deleted files from files that are stored on a virtual hard disk such as a virtual hard disk file (.vhd and.vhdx) or a compressed virtual hard disk file (.vdx). Unlike other virtual disk recovery programs, it does not require an Internet connection and can access all sorts of virtual hard disks. You can use it to recover data from virtual hard disk files without having a backup, recover data from a formatted or damaged virtual hard disk, recover data from a virtual hard disk without being able to access the original disk image, recover data from an old or damaged virtual hard disk that was never backed up, recover data from a virtual hard disk file that was created before the backup service was installed, and recover data from virtual hard disk files that were created before Windows Server 2003. It can recover data from virtual hard disk files from different versions of Windows, such as Windows 2000, Windows XP, and Windows Vista. Virtual Hard Disk File Types: Virtual Hard Disk (.vhd and.vhdx) Virtual Disk Extension (.vdx) Virtual Hard Disk Format: Virtual PC (Virtual PC, Virtual PC 2007, Virtual PC 2010, Virtual PC 7, Virtual PC 8, Virtual PC 9, Virtual PC 11, and Virtual PC 2012) Parallels (.vhd and.vhdx) VMware (.vmx and.vmi) Virtual Machine (.vmdk) Virtual Hard Disk Created before Windows Backup Service Was Installed: Virtual Hard Disk File (.vhd) Virtual Hard Disk (.vhdx) If you can't find a file or deleted file from the virtual hard disk image, then you can always use the search function or create a search filter to narrow down the results by file type, size, and other attributes. To do so, use the built-in or custom scan interface, or perform the scan manually. You can also perform incremental searches to find and recover the file again. If the file or the data within the file cannot be recovered, then use the scan interface or scan manually to format the partition and start over again. No matter whether you want to recover files from a virtual hard disk image
