How I can fix it? A: If you have a 2010 PC you would need Windows 7 compatible version of that Toolkit. You can download it and install that toolkit from this link: [And this might help](#): Q: Avoiding duplicate/conflicting resource declaration (while loop) Is there a way to avoid this kind of situations while looping over a list? let i = 0 while i < (package1.Dependencies).Count do let name, version, source_url, conf = package1.Dependencies[i] // do something with the data. i = i + 1 I mean, this is a very rough example. If the dependency list has some duplicate/conflicting data, how to avoid this kind of situation? P.S.: With a list of objects it's not possible to have duplicate or conflicting data, is it? A: It's always possible if you don't care if the data in these resources is the same, but then you would be better off manually comparing them and discarding duplicates. let (package1.Dependencies, package2.Dependencies) = (package1.Dependencies, package2.Dependencies) |> Seq.toArray |> Array.ofSeq |> Seq.distinct |> Seq.map (fun (name, version, source_url, conf) -> name, version, source_url, conf) A: You can use List.unions which will remove duplicates: let res1 = System.Collections.Generic.List (Array.unions package1.Dependencies) let res2 = System.Collections.Generic.List (Array.unions package2.Dependencies) let res3 = System.Collections.Generic.List (Array.unions (res1 |> Seq.distinct)) //res3 contains only one item, because it contains only distinct dependencies form=
