AutoCAD history Autodesk started in the mid-1950s when Bruce Trellis wrote the first CAD software program for the then new PDP-1 mainframe computer. This original product, the Graphic Erector (GEG), was intended to construct construction drawings for factories. The name was changed to AutoCAD when it moved to the minicomputer market. The first retail version of AutoCAD came in 1983 and was a low-end, approximately \$3,000 version that used only a 2 MHz processor, 64 K of RAM, and 640 K of graphics memory. That first version of AutoCAD is still in use today. The first commercial CAD package, VPL, was written for the PDP-10 minicomputer, released in 1979. It was a very powerful package that could model geometry from any viewpoint and could define surfaces, solids, and beams. The pricing was one million dollars per year, which made the PDP-10 a very expensive machine. A year later, in 1980, AutoCAD was introduced as a mid-range package, approximately \$2,000, but only sold directly to corporations. AutoCAD was intended for the manufacturing and design industries, so it had a far more powerful system than VPL. AutoCAD was being used on millions of minicomputers in 1981. A few years later, two major improvements were made to AutoCAD: the AutoLISP programming language was added, and the system was rewritten from DOS to the IBM PC operating system. In the early 1990s, AutoCAD was the leading CAD program. In October 1994, AutoCAD was the first CAD program to be introduced on the Microsoft Windows operating system. It was the first real Windows-based application, which allowed the program to be used on portable and desktop computers. AutoCAD was also introduced on Apple's Macintosh operating system in 1994. In 1997, Autodesk acquired the computer division of Evans & Sutherland, the developers of VPL, and combined it with AutoCAD to form a new company, Autodesk. AutoCAD commands Using AutoCAD, users can work on the drawing they want to modify. The AutoCAD commands are listed on the main menu.
