Autodesk History AutoCAD started out as Auto-cad. This was a copy of Inventor, which was a graphic tool first released in 1975 by Thomas J. Middleditch and Bryan F. Butler as an entry in the Stanford Graphics Software Competition. The Graphics Software Competition was organized by Dr. Thomas C. Middleditch in an effort to stimulate new developments in computer-aided graphics software. The primary purpose of the competition was to stimulate new developments in the area of computer graphics software. The competition's guidelines stated, "There are two important points about the competition. First, it is meant to help software vendors (competitors) get a jump start in the graphic software market; second, the participants are expected to express their software in a graphical fashion. The first of these points means that software must be written specifically for a specific graphics computer; the second means that graphics programs must be capable of representing two-dimensional or three-dimensional objects with the use of lines, circles, rectangles, polygons, etc." John Warnock, a Stanford University PhD student, and David Recker, a Stanford graphics artist, were asked to develop a graphics programming tool to compete for the competition. Warnock's proposal for an "Inventor" was sent to Butler. This software tool later evolved into the Inventor 3D graphics program, which was released by Inventor Systems Corp. and later purchased by the Xerox Corporation. The first version of Auto-cad was originally developed as a 16-bit DOS operating system and graphics tool with a 12 megabyte hard disk. The first version of Auto-cad was not released until December 1982. The first release was bundled with the program drawing package, Auto-algo. Auto-cad was designed to be easy to use for non-technical people. In its original release version, Auto-cad ran on a microcomputer with an internal graphics controller. With the introduction of the IBM Personal Computer in 1981, the program was rewritten from the ground up as a high-resolution 32-bit DOS operating system and graphics tool. Inventor systems also released a package called Inventor 3D graphics in 1982, which also was based on the original Inventor software. The original Inventor software was the forerunner to other CAD programs, such as SolidWorks and Pro/ENGINEER, which were released by DAS

This release included a new 3D modeling platform, Revit, supporting the ability to import and export 3D modeling formats such as STEP and IGES. AutoCAD 2009 AutoCAD 2009 (2nd generation) was released to the general public in 2009. The major enhancements over previous versions included more vector and raster-based features, the addition of applications for Engineering, Landscape Architecture, and Architecture, and faster performance. Also, VIA Macros are now able to call AutoCAD applications on Windows and Mac OS X computers. The new application was a response to the growing global need for AutoCAD in the architectural, engineering, and landscape architecture communities. AutoCAD 2010 AutoCAD 2010 (3rd generation) was released to the general public in 2010 and included numerous new features. It has the ability to open and edit files from file formats such as JPEG, GIF, BMP, PNG, and TIFF. The user can now communicate with Autodesk Exchange using the web-based application or Microsoft Office. AutoCAD 2010 supports standard web browsers and most local Web browsers including Firefox, Safari, Opera, Chrome, and Internet Explorer. AutoCAD 2010 added the ability to choose between the traditional, floating toolbars and the floating toolbars with left, center, and right floating. AutoCAD 2010 also introduced new Windows Aero interface. AutoCAD 2011 AutoCAD 2011 (4th generation) was released to the general public in 2011. The new release added a number of improvements such as tabbed editing, a new command line tool called Autodesk Design Review, which allowed users to preview any revision of a drawing before releasing it to production. Para el Grupo Estatal, un hospital de primera línea debería estar a las puertas de cualquier comunidad, para que quien quiera ir a ejercer su oficio no tenga que desplazarse a otro sitio. Este es el punto más destacado de un informe realizado por el Grupo de Acción Especial para enfermería. "Las quejas más recurrentes sobre el acceso a la salud son cómo hay hospitales cerca de sus casas y cómo hacen falta hospitales en las zonas rurales donde habita mayor número de personas", informa el documento que fue presentado al Consejo Nacional de Enfermería y Alergia. El Grupo de Acción indica que la región con más hospitales de primera línea es Región Norte, con 95 hospitales, mientras que la de menos hospitales es Región Centro Sur, con 30. Aprovechando que la región con más hospitales de primera línea de to
