Model Database CAD models can be stored in a binary format in a so-called model database. The CAD software needs to read and write this file format. Also, the model database contains information about the drawing and the design of the model, such as the building's parameters. The model database in most cases is generated by the CAD system automatically, but some projects use a tool to generate a model database. A CAD database can be created in several CAD formats like DGN, DWG, DXF and many more. The CAD database can be exported in several file formats like CSV, BIN, PLT and ZPL. In addition to the CAD database the model database contains meta information about the model, such as number of revisions, change dates, author and so on. CAD models can be converted to several file formats. The conversion to PDF is commonly used in architectural workflows. Other file formats used in architectural design

are DWG, PDF, DXF and many more. Paper sizes In architecture and related fields, several paper sizes are commonly used such as A4, A5 and A3. For A4 paper, the layout of the paper in the CAD program is scaled to 595mm x 841mm (width x height). For the A5 paper, the layout of the paper in the CAD program is scaled to 420mm x 594mm (width x height). For A3 paper, the layout of the paper in the CAD program is scaled to 297mm x 420mm (width x height). Software and Services Autodesk Map & Model (formerly known as 3D Warehouse), a service of Autodesk which allows for a mapping of a building through a database of 3D building information, with the possibility of adding data and producing navigation maps.
