Use the keygen, it will appear on the upper part of the program. Choose the name of the new key and save it. Close the program. Generating a new key As we are lost, we have to generate a new key. Open Autocad and install Autocad. Use the keygen, it will appear on the upper part of the program. Choose the name of the new key. If you want to generate a new key, in a hexadecimal, use the keygen without password. In the text box "key:", place the key generated by the keygen. If you want to generate a new key with a specific password, in the text box "password:", write the password of the key. Save the new key generated by the keygen. Close the program. Now it's time to distribute the license of the new key generated. To achieve that, just delete the key in Autocad. It will delete the key but not the key that was generated by the keygen, the key will be back. The tool will not install again the key, it will reinstall the license of the key. Now the user will install a new key with a specific password.
