However, some users may require additional settings since the default drivers are not suitable for all printers. Here are some tips that will help you customize your printer settings. Print Settings To set up your default printer settings, visit Control Panel and click Printer and Fax. After you click on "Printers and Fax", click on the "Printers" option. You will see a number of tabs in the Printer Control Panel, such as: • Device Settings • Devices • Advanced Settings • Installer • New and other The first tab "Device Settings" is the primary tab that will show different types of printers. However, you can also go to "Applications and Utilities" from Control Panel and click "Printers and Devices" if you want to look at more information. First, choose a printer driver by clicking on "Install a printer driver" at the bottom of the page. You can also click on "Manage optional printers". The default driver can be displayed under "Install and View a printer driver" if it is available. • If you don't see a printer driver, you may need to search the HP website for the drivers. • If you don't see a

DesktopAccelerator With License Code

DesktopAccelerator is a small software application designed specifically for Windows 7 users in order to help them organize desktop shortcuts and quickly access their favorite programs. Simple looks By default, the utility places by a horizontal bar at the bottom part of the desktop and reveals the shortcuts of several preset tools. You cannot find a help manual included in the package but you can manage to set up the dedicated parameters on your own because they look highly intuitive. Launch any app with ease DesktopAccelerator gives you the possibility to place multiple shortcuts on the preset bar. What's more, you are allowed to adjust the position of the bar on the screen, namely upper or bottom part of the desktop, and choose the number of items that are displayed on the bar. Adding a new shortcut to the bar can be done by importing the executable file (EXE file format) and assigning a custom image (BMP file format) from your computer. Tests have shown that DesktopAccelerator carries out a task very quickly and without errors. It does not eat up a lot of CPU and memory resources so the overall performance of the computer is not affected. Bottom line All things considered, DesktopAccelerator has to offer nothing more than basic features for helping you gain access to several programs on the fly, and is suitable especially for less experienced users. Professionals may look for something else because they may get disappointed by the poor support for advanced options. You cannot adjust the size of the bar, place the bar in a vertical position, make the bar remain on top of other utilities, and adjust its transparency, just to name a few suggestions.
