Real-Time Thermal Imaging in the Anesthetized Rat Model of Hypothermic Injury by Far Infrared and Near Infrared Radiation. The present study aimed to determine the efficacy and safety of far infrared (FIR) and near infrared (NIR) radiation for noninvasive monitoring of anesthetized rat body core temperature during induction of hypothermia. Rats were anesthetized with a combination of propofol and isoflurane. Muscle core temperature of four animals was monitored with an axial minithermography sensor, and rectal temperatures of other four animals were recorded with a subfebrile sensor. In all 16 animals, the body core temperatures were kept at a constant level of 33°C for 3 h by cooling water circulatory systems. Then, the body core temperatures were suddenly rewarmed for the same time period. Then, the body core temperatures were kept at a constant level of 33°C for 3 h by rewarmed the circulating water. The animals were sacrificed 6 hours after the start of the experiment, and the histopathological damage to the heart and kidney were examined by light microscopy. A significant correlation between the rectal temperature and the sensor output during cooling was observed ($y = 0.988x - 0.06$, $r = 0.858$). However, this correlation was not observed in the rewarming process. The NIR sensor could be safely used in the anesthetized, propofol-anesthetized

Elden Ring Features Key:

Two Classes: Warrior and Magician
Collectively Play as Tribes of Players
Dynamic Game World with Various Combat Scenes
Customization as You Play
Infinite War for Endless Game Sessions

Exclusively on PlayStation4 computer entertainment system.

Online features*: PlayStation Network online features require an account and are subject to the PlayStation Network Terms of Service.

* Availability and additional Online Services vary by territory.
