This technology allows players to improve the way they interact with the ball at speed, increasing ball control and making them more effective in all facets of the game, including dribbling, passing, shooting and shooting off-balance. Players can also now adjust the weight of a shot with a pre-snap right stick tap, turning the ball more on its sweet spot to strike a more effective shot. HyperMotion Technology is one of the key innovations that will continue to shape the way we play the game of football, both on the field and on the training pitch. Features include: Visual Creator - Now you can create your own player animations and customise individual player traits by tweaking speed and movement, and even sync the player position to the music using the new Visual Creator. Intuitive New Controls - Play with a new three-button control system on all menus, the D-pad is available when picking moves, assists and shots from passes. Players no longer need to press their secondary right stick when anticipating a pass, new 'stick to ball' functionality ensures the player is always connected to the ball. Pure Motion Soccer - Attacking the player with the ball in full flight is now more intuitive than ever. Footwork is automatically measured to pitch and roll more accurately, take the right position and stride automatically based on the height of the ball. This also gives you the best performance possible by better simulating the footwork of the real players. Optimised Connection to the Ball - The ball model has been tweaked to offer more resistance when in contact to ensure the ball connection is as realistic as possible. On top of this players will feel more connected to the ball both while dribbling and shooting. On-the-Ball Interactions - Players now have more accurate natural behaviours when in and around the ball. Ball Control - Perfect your passing and shooting skills in new dribble techniques and off-balance shots by adjusting the balance and weight of the shots. Players can also tap right stick to adjust the weight of a shot before releasing to hit the perfect shot. Active Stamina - Living blades are required to compete on a weekly basis, now players can lose stamina quicker on the training pitch. Players fatigue faster and stamina can drain quicker when challenging for the ball or in aggressive situations. Positioning in Space - Players no longer need to overload or move too far away from their teammates. Be more reactive to your positions
