The DataSet object is a generic collection of DataTable objects. I want to create a DataSet from multiple DataTables in code. I'm trying to use Visual Studio's designer for my DataTable objects, but I have to get the DataSet out first. I'm trying to use this code: Dim ds As New DataSet Dim dt As DataTable = GetDataTable("...") DataSet.Tables.Add(dt) I'm using the GetDataTable method, but I'm getting a "The Object referenced by the Object" error. Any idea what I'm doing wrong? A: You can't add a data table directly to a DataSet. DataSet.Tables.Add(dt) will fail. You could try this: ds.Tables.Add(dt) Or you could just create an Excel file using your tables, and then open it. Q: How can I create a dynamically linked library with the Ubuntu package manager?
