Many new car owners tend to take their vehicle to a mechanic or car shop for preventive maintenance. However, it should also be a part of the regular care routine of a vehicle. The same is true for Heavy Duty Toilets. Just like any other machinery or appliance, you must take proper care of the Heavy Duty Toilet. Check out the following tips to keep your toilet in good working condition. 1. Change the BOWLING to prevent a clog Pour a couple of drops of dish soap into a bowl (larger ones are better) and run a brush in it to dislodge small particles. 2. Spray the SAND CREAM on the SIDES of the bowl to prevent the build up of a film. Keep in mind that this spray will remove any dirt, grime, or dust that gets trapped inside. 3. Once you have done the above-mentioned steps, take a garden hose and clean the inside using a soft bristle brush and warm water. This is the best way to cleanse the bowl and it will also ensure that debris does not get stuck in the pipe. 4. After making sure everything is clean, take a plunger and apply a bit of pressure on the outside of the bowl to prevent small particles from getting trapped inside. If you feel it necessary, an older carburetor may not allow any plunger pressure to be applied. In such cases, let the bowl clear out naturally. 5. If the bowl is clogged and isn't clearing out then you will have to take the bowl and literally rock it until it clears. This will release any build-up of stuff inside and you will be able to restart your toilet. 6. The tank will also need to be removed from the bowl, sprayed with a liquid cleaner and given a gentle cleaning. 7. While you are cleaning the tank, it's best that you dry the inside of the tank using a clean towel. 8. Fill the tank with water and test it by turning the water on and off. This is to confirm that the tank is
