You can use Photoshop to create mockups, models, and other designs. More and more designers prefer a dedicated program that's better for certain types of jobs. Photoshop's sharing capabilities also make it a popular choice for collaboration between designers. As of this writing, Photoshop CS6 and Photoshop Elements 9 are available. Photoshop CS6 is a huge update, meaning that the older version Photoshop CS5 only has a few minor bug fixes and no major changes. It's the same software, just a few new features. You'll find out more about Photoshop CS6 in Chapter 16.

---

Photoshop Elements 9 provides a streamlined user interface with a simple layout. It offers many features that are similar to those found in Photoshop. As with Photoshop CS6, Photoshop Elements 9 is a huge update, so even Photoshop Elements 8 (see Figure 13-6) is a handful of bug fixes and minor changes. You'll find more information about Photoshop Elements 9 in Chapter 13. **\*\*Figure 13-6:\*\*** Elements 8 has a user interface similar to Photoshop. Use what works best for your company and workflow. Just remember, Photoshop is the single most popular image-editing tool. However, if you're doing only a few basic editing tasks and find that a software package works better for you, you can save money and avoid the headaches of learning a new package (which you would have to do if you opt to use a dedicated Photoshop-like program). Because everyone uses Photoshop, many graphics companies offer a version of Photoshop to their customers at no charge. Some of these programs offer more than a simple version of Photoshop. You may find it helpful to research

companies and programs ahead of time to see what they offer. Designing Layouts with Templates Templates are preset designs — as a designer, you choose from a selection of elements, and the program automatically generates a finished layout. The best part is that you only have to define what's unique about the project (like colors and other design details) and the layout is automatically designed, formatted, and optimized for the unique elements. Photoshop offers a wide range of templates, such as magazine layout templates. However, by creating a set of files (not just in Photoshop), you can create your own templates. You can share these files with other designers so they can customize them and make them their own. Don't confuse this process with creating a template from scratch.

You can create a completely customized layout by arranging different elements in

ways, often without having to purchase Photoshop. You can use Adobe Photoshop for editing photographs. It allows you to change and manipulate images in ways that other graphics editors do not. It is a more powerful tool for fine-tuning images. Many graphic artists use Adobe Photoshop to edit photos and other images. You can apply filters, effects, and colors to images in this program.

Searching for specific deoxyribonucleic acid sequences by hybridization to microchips provides powerful tools for the analysis of genetic information. The success of hybridization-based DNA probes is largely a function of the sequence of the probe molecules and the density of the probe molecules on the surface of a solid support. The sequences of hybridization probes are designed so that they precisely match a specific DNA sequence in an organism of interest. The organisms or cell types of interest may include human, mouse, pig, rat, dog, cat, cattle, chicken, turkey, fish, snail, crab, rat, and the like. Because of the widespread use of molecular probes for diagnosing and treating genetic diseases and conditions, a number of hybridization reactions are taught in the art. In one class of hybridization reactions, a complementary nucleic acid molecule is immobilized to a substrate for use in hybridization reactions.

---

Some examples of methods for immobilizing complementary nucleic acids are described in European Patent Application No. 79200475.6 and no. 90208043.8, which are incorporated herein by reference. These methods and others provide for detection of complementary nucleic acid molecules immobilized on a surface of a substrate. One example of a procedure that employs these methods is dot blot (DNA) analysis. In one embodiment of a dot blot process, two populations of molecules of interest are prepared. The first population of molecules consists of labeled molecules (e.g., radiolabeled, fluorescently labeled, or chemiluminescently labeled). The second population of molecules consists of molecules unlabeled (i.e., native DNA). The populations of molecules are allowed to hybridize on a substrate in such a way that each nucleic acid molecule is sequestered in a separate and distinct spot. Often, the immobilized molecules are one or more polynucleotides. The affinity of the population of molecules to the immobilized molecules is generally related to the temperature and the salt concentration

---

in the mixture, such as electrophoresis buffer. The temperature also plays a role in screening the population of molecules for hybridization to the immobilized molecules. There are generally two techniques for conducting hybridization reactions, Southern blotting and Northern blotting. Southern blotting involves using either denatured or native DNA fragments as a population of molecules. Denatured molecules are prepared by heating the DNA to a predetermined temperature that will denature it (e.g., 95 degrees centigrade for 20 minutes)

Q: how to eliminate backslash when using php function  
how to eliminate backslash when using php function  
`$category = str_replace("\\", "", $category);` i wanna to eliminate backslash when use php function  
i wanna to eliminate backslash before using this function  
A: What you're doing is called escaping. Basically, if you have a string that looks like this: "some text with "quotes"" You

---

may need to remove the escaping and have the php function either remove the escaping, or include the backslashes in the string. If you remove the escaping, you'll have "some text with quotes" and then if you have the PHP replace the quotes by "" Harry Potter Or Not By Bryce\_C (Bryce Cutler) The theme has been written by my friend Bryce Cutler. He's a science fiction writer, but also his company is called Manticore. He has a blog where he posts this sort of art. I'm actually kind of honored that he chose my art for the theme, since I think it's awesome. He decided to "erase all references to Harry Potter", so I figure he left a little or maybe a lot of Harry Potter! What you see here is also in my own gallery! You can leave a comment here, or on his blog. Also, check out his gallery here! /\*!
