A: I'm not entirely clear on what you are trying to do here but if you are wanting to get data from file.txt to check it is there and then loop through it and output the data into file.txt for later editing, you could do this with the bash scripting language: if grep -qF '/datadump.txt' file.txt; then for f in \$(cat file.txt); do grep -i '*\$f' file.txt > /tmp/file-temp-data.txt done fi This would also check for the existence of file.txt and if it is there, would append the data to /tmp/file-temp-data.txt and then loop through the results of that append and output them to /tmp/file-temp-data.txt for later manipulation. See the manual page for more information. #include "halib.h" #include "FxUnit.h" #include "UiConfig.h" #include #include #include #include #include #include #include #include #include "vdpauhelper.h" namespace VDP { bool isadirect = true; bool direct = true; bool directdri = false; bool directgl = true; bool isFullDma = true; bool fullDma = true; bool isFx = true; bool fx = true; bool isOpenGL = true; bool gl = true; bool nogl = false; void PrintUsage(); void PrintVersion(); void PrintFloatUsage(); void PrintBufferUsage(); void PrintConfigUsage(); void PrintSettingsUsage(); float fps; float fps_old; float video_buffer_left; float video_buffer_right; float video_buffer_top; float d0c515b9f4

It will be the first occasion when the royal family will wear the pearl white crown. King Maha Vajiralongkorn's grandmother Queen Sirikit has worn it in the past. The Crown Jewelry Bureau said the new crown would be given to the king for his marriage ceremony to the daughter of Crown Prince Vajiralongkorn and Princess Ubolratana, both of whom are in their early 40s. The royal family has been using the old crown made of gilded gold since King Vajiralongkorn ascended the throne in 2016. Previously, the new crown will be given to the king after he enters the new capital city of Phra Nakhon Si Ayutthaya in the coming months. The royal foundation ceremony to announce the date for the wedding is scheduled for next week. Thailand's King Maha Vajiralongkorn Bodindradebayavarangkun gestures as he leaves the decorated parade grounds of the royal military base of Hua Hin, on the outskirts of Bangkok, Thailand, Friday, Aug. 23, 2016. At a ceremony at the base, the king formally inaugurated the army of the Royal Guards, the troops traditionally assigned to defend the monarchy. (AP Photo/Apichit Jinathong) This is the first time to see the new crown. Bureau director Thanasit

Q: Python/PyQt5 sort date from database I'm writing a small chat app, which connects to the database and retrieves the (sorted) date from a database column named "time". In the GUI, I want to list the recently sent messages in chronological order, so I'm using the sorted() function. However, the output in the GUI is not sorted, and when I move the cursor over the list, the newest date is shown, even if I'm looking at an older message.

```
from PyQt5 import QtCore, QtGui, QtWidgets
def send(m):
    global Time, msgCount
    Time = m.sender.dateTime
    msgCount = m.messageCount
    chatlist.append(msgCount)
    for chat_msg in sorted(chatlist):
        print(chat_msg)
```

While here, the chatlist and the messages are displayed as ordered by date, in the GUI the date is not sorted.
