Simplicity and usefulness is what makes AutoCAD so versatile. It can easily be used for a variety of purposes and it's particularly suited for designing architectural, mechanical and electrical engineering drawings and drafting. In fact, it's one of the most used technical drafting tools. You can start your own business by selling AutoCAD online or you can use it to earn a living, either through a company that uses AutoCAD or as a freelance CAD designer, or by creating AutoCAD training videos. AutoCAD is one of the best selling desktop design software applications in the world. If you are looking for more information about AutoCAD or want to become a CAD designer, we have created the following information for you. AutoCAD: History AutoCAD, originally called Autocad Distiller, was released on November 23, 1982 as an add-on to AutoLISP. It was originally designed to be an add-on for AutoLISP, but soon the Autocad companies decided that this was too limited and that an entirely new CAD software application should be developed. AutoCAD was developed by Donald De Line and Peter Benson at the Salt Lake City engineering firm Smith Engineering Associates. AutoLISP had already been developed at Smith Engineering by De Line and other engineers who worked with his firm, but when Benson joined, he brought AutoLISP with him. With De Line and Benson on the same team, they were free to collaborate on CAD software development. On the fourth day of the first AutoLISP conference, they began working on a new software application called Autocad Distiller. Autocad Distiller was quickly renamed AutoCAD and became the base for the development of AutoCAD. However, AutoCAD was not developed by AutoCAD Inc. (now known as Autodesk) until 1987. In 1983, AutoCAD 1.0, Autocad Distiller 2.0, and Autocad Graphic 3.0 were released. The first three Autocad software applications were available for purchase on floppy disks. The first three AutoCAD applications ran on computers with 64 kilobytes of memory and 8 kilobytes of video memory, and the first versions of AutoCAD ran on PC XT computers. However, the first computer that Autodesk used for the AutoCAD development was a DEC PDP 11/23, which ran at

CIE L*a*b* The (CIELAB) color model, or CIE L*a*b* color space, is the mathematical model defining the interactions between visible light of the spectrum, and the human perception of color. This color space is analogous to the RGB color model but is defined in terms of two numerical values for each color. This means that one color can be specified by two numbers whereas with the RGB model, three numbers are required. There are three quantities defined for the L* (lightness), a* (green–red chromaticity) and b* (blue–yellow chromaticity) and the color can be specified by the use of these values. These values are transformed into the RGB color space (when being used in conjunction with the RGB color cube) by the following formulas: The L* is correlated with a white point, the CIE chromaticity diagram (CIE-XYZ diagram) shows the X, Y and Z coordinates to be (0.9506, 0.3127, 0.0864), the Y coordinate correlates to the L* and the Z coordinate correlates to the b* value. The a* value has no correlation to any physical quantity. With this system, each color is specified by a tuple, (L*, a*, b*) but the intensity of the colors is characterized by the L* value. A calculation of the hue angle H* is given by a*−b*. A* In addition, the CIE coordinates of the CIE L*a*b* chromaticity diagram may be calculated using the following formula: Where x and y are the CIE X and Y coordinates respectively, C is the CIE XYZ chromaticity point (0.9506, 0.3127, 0.0864) and t is the CIE tristimulus value (0.345, 0.318, 0.060) which corresponds to a CIE L* of 50% white and a CIE a* of 0. In practice, the a* (and b*) values are calculated by linear interpolation between the L*a*b* coordinates of the L*a*b* chromaticity diagram. CIELUV In addition, the CIELUV color space (which is a variant of the Lab space) can be calculated using the formula: This is similar to the LUV space. Natural colors ca3bfb1094
