It is a "must have" for graphic designers and fine arts students. * It is also a must-have for anyone who wishes to use images as a portfolio, a business tool, or a promotional/advertising tool. * Photoshop has been around for a very long time and is fairly easy to use. It is a drawing program for creating professional quality illustrations and graphics, using highly precise vectors that are created and edited for maximum detail. Adobe Illustrator has many features that give your vector graphic images a professional look. Some of these are as follows: * It is used for creating logos, company letterheads, posters, and the like. * It is used by many designers to create commercial images. * It has good scaling and can be used to create complex art with many layers. * It is designed to accommodate the creation of complex graphics using thousands of shapes and easily editable vector paths. * Another plus in Adobe Illustrator is that its drawing tools are easy to learn and use. * Adobe Illustrator is a great drawing program for the design of 3-D objects. * It has great technical support. Adobe Photoshop Elements is free for anyone to use to make changes to existing images and create new ones. If you already have a copy of Photoshop Elements you can use it to view, edit and format your own images and see what changes are made in real-time. The following tutorial will take you through a simple technique to make a pin-up style image with just a few simple steps. This technique can also be used with other images or to create new images. Steps to create a pin-up 1. Create an image The first step is to create an image. Open a new, large file. It's best to use an image with a white background. 2. Create a bright background The next thing you need to do is create a bright, colourful background for your image. Open Image -> Adjustments -> Brightness & Contrast. Set the 'brightness' slider to the left, and the 'Contrast' slider to the right of the 'Brightness'. This will brighten the image and make the background bright. The screenshot above shows the 'Brightness' slider set to left, and the 'Contrast' slider to the right. 3. Create a single subject Now we are going to create a pose for our subject. Open the image you have just created. Select Image -> Text -> Add Text. Type your pose. You can create a text box of any size to fit the text. In the example below I created a medium sized text box to fit the pose I had written. Click inside the text box you created. You should now see the text 'POSE'. You can press the Enter key to accept the changes. Click OK to close the window. 4. Add more text Next, I want to add more text to the image. I want to write 'Forecast' in the top right hand corner of the image. Open Image -> Adjustments -> Add New Adjustment Layer. Choose the 'Text' tool. It should automatically go to the correct size and position. With the right mouse button, you can resize and change the position of the text. If you select the tool with the left mouse button, you can type your text as well. A text box should appear in the canvas. You should be able a681f4349e
