AutoCAD Architecture Figure 1. AutoCAD is a sophisticated CAD application that supports both command-based and point-and-click interaction. AutoCAD consists of three main elements: the application window, which is presented to the user on the screen; the drawing environment, which is the area where the user interacts with the application; and the database of drawing data, which contains the drawing content. The three elements interact with each other, and each of the elements can be in two states. In the default state, the elements appear to be inactive, or invisible. When the user interacts with the drawing environment, the elements are in the active state, and the elements update to reflect the user's actions. The AutoCAD user interface (UI) consists of a set of default elements. The first element to appear on the screen is the "AutoCAD Design Center," which contains the title bar, menus, and other visual cues that indicate the application's status and main features. The next element is the "Application Window," which contains the main user interface. The Application Window has title bars for the left side, the right side, and the top of the screen, as well as a menu bar across the top and a status bar at the bottom. The status bar includes the application name, date, user's name, and company name. To the right of the Application Window is the "View" menu, which includes options for viewing the drawing and drawing content (see Figure 2). The menu bar is dynamic; when the user clicks on any of the items in the menu bar, the corresponding menu appears at the top of the screen. When the user chooses a menu, the corresponding menu items appear at the top of the screen and the menu disappears. The drawing environment (the drawing canvas) is the area in which the user will make changes and add content to a drawing. It consists of drawing objects, data windows, annotation tools, drawing editors, user-defined commands, and other components. The database is a repository for drawing objects, drawing content, annotation tools, data windows, user-defined commands, the drawing environment, and other user-created entities. Figure 2. The User Interface contains the tools and features for users to create, view, and modify a drawing. The AutoCAD design center is the hub for managing the data in the database and for interacting with the drawing environment. The design center consists of a large navigation bar to the left

I think the wicketkeeper-batsman has done the most but I have been trying to add the wicketkeeper-batsman into the mix. I am getting close" - Cricinfo - "I wanted to build an innings around the wicketkeeper-batsman. Earlier in the season, it was the slip cordon. In the last two games, I had not tried a lot of things. If you try things and it doesn't work out, it is easy to blame the bowler. I felt this game was a little slow so I wanted to add the wicketkeeper-batsman into the mix. He is very good at batting and I wanted to build an innings around him" - Wisdenindia.com - "The ball-throwing is not as good as it should be. Once the ball is up, I want to be ready to cut. The wicketkeeper-batsman is ready to be at the crease and this gives me the chance to take the new ball from either end and attack the new ball" - Wisdenindia.com - "The wicketkeeper-batsman doesn't have a good eye. He does well, but the eye is not as good as it should be. It is a learning curve for him. I think we have hit a good time. Both the fast bowlers have taken wickets" - thehindu.com - "I will have to attack the new ball with the bat. There is still a lot of work to be done. I will af5dca3d97
