Detecting Duplicate URLs I am extracting  
URLs from an HTML document using a  
HTMLParser. I am using the following piece  
of code: from HTMLParser import  
HTMLParser class  
MyHTMLParser(HTMLParser): def  
handle\_starttag(self,tag,attrs): if(tag=='a'):  
text = self.retrieve\_tag\_text(tag) #print  
"retrieved text", text pass parser =  
MyHTMLParser() parser.feed("""abc@xyz.co  
mxyz@xyz.com""") But it only finds out one  
of the URLs. How can I detect all duplicate  
URL's? A: You are passing a tag to  
get\_tag\_text that is only one character long.

---

That doesn't match the parameter name. In your example, I'd expect the method to match tags of type str, but that's not what you are doing. Try the following instead:

```
def handle_starttag(self, tag, attrs):  
    if tag == 'a':  
        text = self.retrieve_tag_text(attrs['href'])  
        # print "retrieved text", text
```

This will simply loop over all the href attributes on the page. If you want a more specific result set, you should probably look at BeautifulSoup or SoupStrainer.
