these applications are used to create a master for my finished piece. the reason for this is that the more programs i use the more data i have to keep track of. you see, this is a problem when it comes to sharing projects. in the past i had to make my media files smaller, for example, in cinema 4d i reduced the size of my clips down to 30mb. however, this has always been a problem for me because i cannot share a lot of files in a portable format. i have tried to make my media files as small as possible by using motionpath, encoding my clips to h.264 and deleting unnecessary data. as you can see below i exported a clip from after effects and then imported it back into avid to render out a second clip. if you are doing anything related to motion graphics, you need to upgrade to cinema 4d r16 studio. if you are in the gaming industry, you need to upgrade to the new maya plugin. if you are in the film industry, you have to upgrade to the new red plugin and work on getting it to your customers before the snow falls. and if you work with the softwares that are in cinema 4d then you should consider r16 as well. c4d user group if you are looking for more information on cinema 4d, take a look at the cinema 4d user group. c4dug is a forum to discuss, teach and learn about cinema 4d. it's a great resource for many types of users from aspiring cg artists to seasoned professionals. if you are a user, you can't afford to miss it. cinema 4d university if you want to know everything there is to know about cinema 4d, you should take a look at the cinema 4d university tutorials. in addition to the tutorials, you will find several forums where you can find support for all of your questions. if you are a student or a teacher, this is a must for you.

the polygon pen tool is the first new feature of the r16 studio that i tried. cinema 4d has always had a really cool feature in the shape tool where you can distort a shape in order to get a weird or different effect. this feature has also been in after effects and is probably one of the best tools in the industry. in cinema 4d, you can create similar look of the distortion effect by using the polygon pen tool and its built in 3d acceleration. you can use the polygon pen tool to create gears, spinners, and what have you. i have been using cinema 4d for the last 8 years and have been satisfied with what it has to offer, but i finally decided to upgrade to the newest version of cinema 4d (r16) in hopes of seeing what the new features are. i noticed that many of the new features were all in one update, so i was expecting a major overhaul. however, i was pleasantly surprised to find that the latest version of cinema 4d does not really change the software much at all. a few new tools and a few major updates are included in the newest version of cinema 4d, but the core of the software is still there and still does all the things i need it to do. the problems i had with the older versions of cinema 4d were not really a problem with the software. it was more a learning experience. i am going to have to

relearn how to use the software and how to do things like navigate the menus and figure out how to use the software. one of the biggest problems i had was figuring out how to access the tools. it is all now in the top right corner, which i hate because i am left handed and have to look up to use the tools.

one of the problems i had was the tool palettes, i could not find where to change the tool palettes and even after i did, i could not figure out how to change

the color of the tool palettes, i needed a color picker. there were other things that i struggled with such as the inspector and the alt key shortcut for the polygon/ellipsoid/paraboloid tools. the shortcuts for the tools in the 3d view are important for me to

use, because i am a right-hand dominant person, and i use my right hand to make the majority of the tools, so i need to be able to use those tools easily

with my right hand. i still have some of the problems i had with the older versions of cinema 4d, but i do not have as many problems as i had before.
