
.NET Framework 3.5 4.8 Update KB4534132 (Jan. 28, 2020)

the following criteria specify the severity of this update: risk factors: a remote unauthenticated attacker could exploit the vulnerability by sending specially crafted requests to a .net(or.net core) application over http. an attacker could then install programs; view, change, or delete data; or create new accounts with full user rights. users whose accounts are configured to have fewer user rights on the system could be less impacted than users who operate with administrative user rights. privileges required: administrative. user impact: the operation of a malicious program could allow a remote attacker to execute arbitrary code with the privileges of the current user. to resolve these vulnerabilities, upgrade .net framework to the latest version. after you have upgraded, check for updates by running the .net framework configuration tool, which is located at `c:\windows\microsoft.net\framework\`. for more information, see [microsoft.net framework update rollup](#). for more information about upgrading, go to the following [microsoft.net framework security updates web site](#). for more information about configuring .net framework security settings, go to the following [microsoft knowledge base](#). for more information about previous security releases, go to the [.net framework sysinternals tools web site](#). a remote code execution vulnerability exists when the microsoft.net framework fails to validate input properly. an attacker who successfully exploited this vulnerability could take control of an affected system. an attacker could then install programs; view, change, or delete data; or create new accounts with full user rights. users whose accounts are configured to have fewer user rights on the system

could be less impacted than users who operate with administrative user rights.

.NET Framework 3.5 4.8 Update KB4534132 (Jan. 28, 2020)

files that have a date equal to or after feb 4, 2020, are installed after applying this update. for more information about the update history, click the following article number to view the article in the microsoft knowledge base: file date size attributes operation](/previous-releases/security/advisor/aspnet_regiis.md)">aspnet_regiis.exe 21-jan-2020 3.07 mb platform configuration none installed - added opt-in retry mechanism when configuring listening endpoints on the wcf activation service to address potential race condition when rapidly restarting an iis application multiple times while under high cpu load which resulted in an endpoint being inaccessible. customers can opt in to the fix by adding the following appsetting to smsvchost.exe.config under the %windir%\microsoft.netframeworkv4.0.30319 and %windir%\microsoft.netframework64v4.30319 folders as appropriate. this will retry registering an endpoint 10 times with a 1 second delay between each attempt before placing the endpoint in a failure state. 5ec8ef588b
