Orcad is a complete integrated suite for electronic, mechanical,. Free download orcad 9.2 portable 7 out of 5 stars 3,719 downlaodmefi.oracle video driver for xps m1501 kodak imagereporter 3.0 manual downloadfull personal video recording software for windows 7 64 bit v 8.8 4.6 mircocodesQ: Input variables to a sentence with white spaces in between I am trying to take several text files, transpose them, and store them in a single new text file. I have been able to open a number of text files in various windows, and using Windows batch format (.bat), have been able to transpose the entries within the text files (by calling another.bat which transposes them). However, when I try to write the results to a new file, I am having trouble getting the white space to come out in the new file. When I transpose the data, white spaces separate the entries in the text file. I want this to be a single sentence on the output file. Here is what I have so far: @echo off setlocal EnableDelayedExpansion set BDC=%CD% set DELT=. for %%a in (FILE\_1 FILE\_2 FILE\_3 FILE\_4 FILE\_5) do ( set /p source= call :tranps %%a for /f "tokens=\*" %%b in ('type!source!') do ( echo!b!>>file\_!DELT!%%a.txt ) ) exit /b :tranps set var=%1 set var=%var:~0,-1% echo!var! echo echo Enter y/n to continue? (n=no, y=yes) echo. echo Do you want to continue? (type y=yes or n=no) echo. echo. set /p ans= if /I "%ans%"=="y" ( goto ret ) else ( goto :eof ) :ret exit /b The output of this is : Enter txt files to transpose: f988f36e3a
