The TMD5600AU is a programmable switch for PLC/PC based systems. It is based on the TMD5600AK-H5 which is a single gate time function module. The module is a fully synchronous, zero cross, non-volatile programmable module that runs an open source firmware, written in the PIC(C) programming language. The PIC-16F877 and 16F881 Microcontrollers are used to power the module. The firmware is distributed as a single ZIP file for download. The PIC16F877 has no reset and a non-volatile latch. This allows the program to run without restarting the system. An internal self-test is performed and if the firmware is OK, then the whole system is reset. The firmware offers the PLC field bus functionality including the following: - The Controller/Processor can be addressed and execute any number of different types of commands. - The system's Input/Output can also be addressed and executed commands. - The PIC microcontroller provides a flexible 2edc1e01e8

FreeSCADA is a FreeFirmata Arduino library that provides a SCADA (supervisory control and data acquisition) system that can be used for monitoring and controlling industrial processes. FreeSCADA is a complete project, which includes an application (GUI) for the real-time visualization and control of the processes. Features: Powerful simulation and remouting that allows you to simulate and control any process using a real-time visual interface. GUI for SCADA application that displays detailed data information on process parameters, alarms and warnings. OPC server for the real-time collection of sensor data and automated remoting of the data into the application. FreeEthernet to connect the Arduino and the network. An example sketch that creates a simple SCADA application, based on the single pipe process: - Can be connected to an Arduino-based, OPC-enabled control panel - Allows you to view and control a process using a visual interface and a remote control panel. - Includes example algorithms to enable you to adjust and automate the process It is an Arduino library, which includes an application that you can start on an Arduino-based control panel. To create an application with the library: - Go to the Arduino IDE, open the Sketch menu and choose: Include Library -> Add Library... - Find FreeSCADA and choose Open - The library appears in the libraries pane To run the example: - You can use the Libraries menu item to run the example sketch. To get the example: - Download the example sketch and Arduino_freeSCADA.zip - Unzip the archive and open the folder with the Arduino IDE To use the library: - Go to the Libraries menu item, select FreeSCADA and choose Open - Then you can start your project. The sketch has a sensor and a simple algorithm that monitors the process and adjusts the flow rate. This simple example shows the GUI and remote control functions: Figure 1: FreeSCADA GUI The application also shows alarms and warnings in the status bar, and enables you to set up alarms, warning and fault conditions. You can see the alarms and warnings in the Application Status menu: Figure 2: Application Status The application also enables you to assign the controls and monitoring of the process to different users. Each user gets his own set of controls and views and he can set access restrictions and logging. Figure 3: Settings for user 1 Figure 4: Settings for

What's New In FreeSCADA?

FreeSCADA is a complete SCADA system. • Start a single node scada client. • Client can view OPC server, change variables, reroute. • Develop visualization by designing diagram. • Use design to visualize and control SCADA systems. NOTE: This project is intended for learning purposes only. It is not intended to be used to implement a project of your own. Do not sell the software. The server can be run on one PC or multi nodes (PC - PC) with up to ten connections. Note that the server is not compatible with Windows 7 64-bit. In this case, you need to install 32-bit version of the server. When there are many nodes running at the same time, they can connect with the same server. For each connection, the client can make a maximum of two nodes. What's New in this Release: 1. Support was added to the multi-node connection. The PC client can connect with more than 10 nodes.// Copyright (C) 2009 The Android Open Source Project // // Licensed under the Apache License, Version 2.0 (the "License"); // you may not use this file except in compliance with the License. // You may obtain a copy of the License at // // // // Unless required by applicable law or agreed to in writing, software // distributed under the License is distributed on an "AS IS" BASIS, // WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. // See the License for the specific language governing permissions and // limitations under the License. package com.google.gerrit.server.project; import com.google.common.base.Strings; import com.google.common.collect.ImmutableSet; import com.google.gerrit.extensions.client.ClientInfo; import com.google.gerrit.extensions.restapi.AuthException; import com.google.gerrit.extensions.restapi.MethodNotAllowedException; import com.google.gerrit.extensions.restapi.Response; import com.google.gerrit.extensions.restapi.RestApiException; import com.google.gerrit.extensions.restapi.Url; import com.google.gerrit.server.CurrentUser; import com.google.gerrit.server.config.GerritServerConfig; import com.google.gerrit.server.group.SystemGroup; import com.google.gerrit.server.project.ProjectCache; import com.google.gerrit.server
