Adobe's next big change with Lightroom was the 'library' approach, which became Lightroom. This created an entirely new user experience. The style and design of this program was inspired by Apple's own App design (Mac Preview and Give Feedback). Completing your editing with Adobe products was easier. It also meant that Apple provided many of the features that were missing in their image editing software. It also, of course, meant that the new 'Library' feature named after the 'Workflow' in Lightroom would not require additional Adobe Touch software. Also, Adobe gained the likes of Lightroom and Photoshop Elements customers to their product. Adobe has always made image editing software but didn't get the job done as well as a competitor, Apple, changed the editing scene. The competition forced a change in strategy and made Adobe push in a direction of 'How do we move into the Apple space?' The answer was Photoshop Touch, an app that brought nearly everything we can do in Photoshop to our own devices, whether they were mobile at the time or not. The big difference was that it was native. Adobe was able to get a lot of computer-savvy people to use their image editing software in an entirely new way. So, it has continued making software that makes the most of their own technology, updating, adding and cutting features. Adobe Photoshop 2023 is the longest update yet for Camera RAW, which is now version 7.4.3. This version includes new, more efficient algorithms for the Smart Trim tool, the Filmstrip, and batch processing.
