Besides, it also offers a folder list, displays the system tray icon, supports shortcuts, changes the window theme and more. Finally, it supports multi-threading, as well as backups, restore, encryption, and more. KEYMACRO does not offer any help files, and it is not fully compatible with Windows 10. However, the tool was intuitive to use during our tests. KEYMACRO runs with minimal system resources, but it needs improvement. It was not able to handle our account settings properly, but it did manage our files. The window's background looks faded and blurred. Also, the tool didn't display any files in the folder list when we attempted to open it. This might be due to the tool not having support for the Windows 10 operating system. However, KEYMACRO is an easy-to-use program, and it had no errors during our tests. The interface feels nice and neat, but some elements need work. It's not possible to access any help files, which is also a common problem for some of the other tools on this list. Keymacro can automatically restore

applications and files, as well as make backups of them. The feature works with all file types, and it also supports zip files. Furthermore, you can change the system date, time and time zone, enable/disable hibernation, switch off applications and change the desktop wallpaper. Plus, you can also customize keyboard shortcuts, change the mouse pointer, move the desktop clock, create a screen saver and more. The program supports multi-threading, but it requires some enhancements. It's not compatible with Windows 10. Furthermore, it was not able to open our Microsoft account settings, and it didn't have a built-in help file. We were not able to open any files using KEYMACRO, but we did not encounter any problems or errors. Also, the tool did not show any ads or pop-ups during our tests.
