Whether you need to create a variety of effects, edit, retouch or create any type of photo, you need to have the newest version. It doesn't matter if you're a graphic designer, web designer, student, or a photographer, if you like to make changes to photos, you need this program. The software continues to expand features and tools to do different types of photo editing, retouching, and photo manipulation. Some people think that Photoshop is simply for photo editing. You're wrong! You can also use the Find feature to search for your specific keywords rather than just the names of applications. For example, I found my brother but also my cousin. That's not unique but it's also not how I would go on a particular site. The other cool thing is that you can bring up key words of users, and GetApp will bring up all of the reviews for that keyword. For example, if you want to narrow down reviews to those with "Photoshop" in the title, just filter by Title: "Photoshop". The review process is pretty easy. Just read it and click 'like' or 'dislike'. Once you add a star, it becomes visible in the reviews panel and you can click the star to bring up the reviewer's page. Reviewing another user's work is part of the service and something you might do to improve your work. Reviewing a user's work gives more credibility to your comments so you may become more respected. I suppose I've been meaning to look around, but I haven't done any features of the CS6 version of Photoshop, so I sort of needed that as a starting point. I think the interface is exactly what it should be. It's a gentle expansion of the interface of last year's Photoshop and I like the fact that everything fits on the screen well and has a focused purpose.
