Creating any of the images used in this review would have been impossible without the incredibly talented team at Adobe. We're dedicated to creating a world-class digital imaging platform, and so each year they look for ways to improve the end-to-end workflow of creating, sharing, and publishing those images. The new Creative Cloud features in this release are just the latest step and demonstrate the dedication to making Photoshop even better. PC Review named Lightroom 5.0 "One of the 25 Most-Anticipated Applications for 2009." I was happy, but honestly, it took a little bit of a soul searching to sit down and write the review. I say this because I'm not an enterprise review at all; I'm primarily a consumer publication. I serve the needs of my readers by having a pretty simple comparison of a competitor's product and the product it directly competes against. While this is done in a very professional manner, ultimately, it's reader-centered in that I help them do their job. That's not the goal of most enterprise reviewers. Adobe Photoshop's video features also got a big jump. Photoshop includes capture and streaming tools similar to what's included in the latest versions of Photoshop Elements. Adobe Story is a fully featured animation and motion graphics app. Elements 2020.1 features a tool for creating vector graphics and a slew of other tools for more efficient typesetting. It also lets you import any data in a spreadsheet into Photoshop. Document Cloud, meanwhile, makes it easier to work with documents you create in other Adobe apps. Additionally, Adobe introduced new Smudge and Bleed tools that apply the effects to the colors of the text rather than the surrounding background. It's a big update, and it's free.
