Cracking Adobe Photoshop is a bit more involved, but it can be done. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

I'm an amateur photographer, and I've been using Lightroom since version 2. I use it exclusively on my MacBook Pro with an external keyboard and mouse. Now I've got an iPad Air and recently bought the Apple Pencil. In the past my workflow with Lightroom and the iPad Air has been to take photos and edit them, and then send them to Dropbox for storage thanks to my Google for Education account. **However, during my latest photo shoot**, I realized that I needed a better workflow for all of my photos. With a view toward editing larger RAW photos of landscapes on the iPad Pro, I needed a better way to creatively and Quickly edit. My photo shoot last month resulted in a lot of photos to view and edit. I thought that I could edit them on the iPad Pro but I didn't want to click through each of the photos and navigate with tap on each photo. I'm an indecisive person and even when I can find a method that produces the desired look and feel, I can always change my mind. I didn't think that I would be able to find another workflow that could satisfy my creative editing needs while still making it simple. I found that I was able to use the Apple Pencil to navigate through photos and review RAW photos. **Initially, I was a little skeptical.** But after viewing the Lightroom Mobile app for the iPad for the first time, I could not believe my eyes. Lightroom was a disaster on my laptop with the Pencil because there were only specific certain areas that I was willing to tap the Pencil on. On the iPad, editing photos is much more flexible. I was thrilled with the results! I was honestly surprised at how easy it was to set up and edit photos just as I had done on my MacBook Pro. As time went on, I was able to narrow down my workflow and found that I can go to **Settings > General** on the iPad Pro, scroll down to **Lightroom Mobile** and tune down my workflow to just what I need. The best part is that I'm able to take photos with my iPad Pro and edit them immediately on the iPad Pro. Now I can upload my photos directly into my Google for Education account and have easy access to them. I plan to write a review of **Lightroom Mobile for iPad Pro**, but in the meantime give it a try and let me know how it goes. This is my New Workflow!
