Have you ever set a bitmap background to an Illustrator file or even Photoshop to give your finished art an elegant yet timeless look? With the new feature in Photoshop CC, you can take 50% off the cost of Adobe Cloud Storage and set a layer as a Background. Photoshop users who upgrade from CS6 or older versions of the software will also receive the new "Enhance your images on the go" feature, which provides camera-ready printing and image optimization for mobile use. Other key new features include a new Adaptive Sharpen tool, automatic cropping of images, better cross-process editing schemes and the new Buffered Shapes, which automatically simplify and smooth vector shapes, for faster editing. In the new Develop module, Tool Panel, you can also now edit historical camera profiles included in the camera's manufacturer profile. Other new features announced include a new tool for the dual-monitor workflow called Surround, a tilt-shift filter, a new stability option for Photoshop, and a number of updates to tools such as Camera Raw, Adobe Camera Raw, the Kelvin slider, and Smart Objects. First up is darktable 2.0, coming at a time when the competition in photo editing tools is heating up. The new version is focused on the web, with a new URL bar that is easier to navigate from 1 to 10,000. You can now resize and zoom much more quickly. Also in-flight, Darktable unveiled its open source project of the year, "Gantt charts and trees." The project, designed to make Gantt charts and trees easy to create and print, includes an online app and an in-app browser that people can use outside the app. Gantt charts and trees also includes database forms, a timeline, multiple layers, and requirements automation. It also includes a cloud-based function that lets you share your Gantt chart with contacts. The command line interface (CLI) of Darktable for Mac OS X is now at version 1.22.5 and introduces new functionality such as a new profile import, exporting to PDF, Exif (photo metadata), and a new authentication mechanism. Other updates include the ability to create raster and vector layers through the use of Smart Objects. Smart Objects are groups of layers that behave in the same way as layers. They can be used to group layers from different files or from different cameras.
