Currently, users get to Delete features only on a small selection of layers or groups of layers. One-click Delete and Fill adds the ability to Select and Delete layers and groups of them. This means users can select a group of layers to Delete them all at once. Adobe Photoshop users can edit outlines and bevels in a strictly linear fashion. In the new Preview Layer Sharing panel, users can delete the layer that they are editing while they are editing the shape or gradient. This enables the sharing of the layers' shapes and gradients across Photoshop and the web between mobile and desktop editing. The new Select and Select in Path panels have been upgraded to preview with more contextual help. New shortcuts include Control-click to select multiple layers in a group, and Shift-click to select all but a particular layer. The Smart Sharpen filter has received a number of updates including the ability to control the brightness of the feature by using sliders instead of just the right and left arrows. Likewise, the ability to Control the X/Y transition of a gradient has been added.
