The old library has a nice system of groups, and you can add layers to a group or directly to a project if you want them in that exact location. But adding and removing layers is no longer a task performed in one simple move. Now you have to move layers from one group to another, and that's not very intuitive. I find the new library great. For a start, the new library works very well, including the new Speed Dial. Every single review I've read of this says basically the same thing. That this is a total rewrite, and it's a great leap forward. That's not to say that it's perfect. There are things that could be better. Long-time users of Photoshop will know what I mean when I say that "you feel like you're on a different software." Once the task is done you can tint, lighten, soften, multiply, or apply effects to your heart's content.
