It appears that Adobe has committed to interleave Photoshop CC and Lightroom CC updates. The Lightroom CC update brought solid performance improvements and clever new features, but the Photoshop CC update brings a range of new features that continue to suggest the vendor sees the program as a core part of the Creative Suite. It's essentially the Photoshop equivalent of Lightroom. Although some of the initial promises - like support for cream, sepia, and low black-level colors — haven't quite been realized, the update is available to download now and the new features certainly have traditionalists eager to try them. Following the same desire, the update also brings the usual range of performance improvements, but it's included a new "Speed" improvement setting that evaluates the operation of "Lightroom Elements" (whatever that might be) and makes sure that it's the optimal settings. So, even if you're using the latest version of Photoshop and Lightroom in tandem, you should see the Speed setting box. You can raise or lower how often it checks, and also whether the check is done when you wake the computer from sleep, or only when you're actually

using Photoshop. The box also allows you to tweak settings in Photoshop and Lightroom instead of running the Performance Checker. Finally, the One Click Merge feature allows you to load up to 50 different photos and blend them together directly into the current image. It pairs with the Photoshop Lightroom plugin to do the same thing. The plugin is available for free for a lifetime, with a \$20-per-year subscription to AFK that also enables you to check how a photo will look if it's cropped or rotated in place.

But the family generally provides access to enough tools that whatever you're after should be easy enough to acquire.  - And now, after years of technology and user feedback, Elements gives you access to all of the best tools from within Elements.
