Cracking Adobe Photoshop is a bit more involved, but it can be done. First, you'll need to download a program called a keygen. This is a program that will generate a valid serial number for you, so that you can activate the full version of the software without having to pay for it. After the keygen is downloaded, run it and generate a valid serial number. Then, launch Adobe Photoshop and enter the serial number. You should now have a fully functional version of the software. Just remember, cracking software is illegal and punishable by law, so use it at your own risk.

Without the shell extension, the application opens much faster, but you will not be able to select multiple files faster and if you have many files to open faster. You have to spend some time searching through the file list or else you will spend most of the time waiting for a preview or editing the picture. Update (April, 2012): Heavy work with photos and LR5 now, it is working really well. I ran a custom image size of a 5,000-by-4,000-pixel shot from last year's trip to Maui. I opened in Lightroom, converted to DNG, added metadata, history, etc. I did not even have a single in-camera JPEG in my collection. And most of my printing programs will not even consider the raw images. If you are interested in a print-oriented program, consider having a look to PhotoPlus Pro 6 lite . It costs a quarter as much as Lightroom and it works on native raw files without converting them to DNG. As I am using Lightroom to import my raw images, I want to know if I can make any changes in the previews (using the Develop module) and export to a DNG file and use it in Photoshop for further edits. Also, if there are images that have been edited using the Develop module and saved in DNG and I want to do the same edits to the image in Photoshop, can I do that? Another thing that disturbs me, whenever I open a new or existing project, I am unable to view my files in the folder group in the left pane. While working on projects in this case, I often lose track of what I have done earlier or what is left to do. With Lightroom, I always keep a separate folder for each project. The files and credit roll for each project gets added to the appropriate folder.
